

MULTI-BAY SAWTOOTH GREENHOUSE GLENORIE, NSW

CASE STUDY

Multi-Bay Sawtooth Greenhouse (Glenorie, NSW)

Crop Type: Commercial flower and plant grower.

Key Challenges: Protecting plants from sun and retaining heat in winter. Installing multi-bay greenhouse on undulating and sloping ground.

Structure type: Multi-Bay 8m x 12m Sawtooth Greenhouse.

Outcome: Completed the structure with limited impact program, so that daily client activity could continue onsite. Greenhouse provides great functionality and flexibility to the client.

This client engaged us to design, manufacture and install an 8 x 12 meter wide Multi-Bay Sawtooth Greenhouses on their site at Glenorie. The client required an eight-bay greenhouse to protect their quality home-grown plants, to be built along a sloping and undulating surface. This required careful project management, from footings and site layout plans, to significant mechanical movements onsite for the installation.

The Multi-Bay Sawtooth Greenhouse was completed during ongoing client daily activities onsite, to limit any reduction in the grower's operations. The Greenhouse is an imposing and impressive presence onsite, providing great functionality and flexibility to the client. Additional value-added services are available to be supplied in the future, along with a duplication project scheduled for next capex year.
